

CRISP

CREATING Innovative Sustainability Pathways

CRISP - Visions

CRISP identified and developed three specific visions for the future, called Local Community, iTech and One Ethical World presenting broad characteristics as follows:

- **Local Community:** Strong regional identity, local production for local consumption, emphasis on social relationships, vegetarianism, social cohesion, individual responsibility, collaborative consumption.
- **One Ethical World:** globalised supply chain, global values are locally interpreted, global healthcare, global governance. Fair trade displaces free trade.
- **iTech:** technology and innovation drives everything. Highly competitive world. Risk is replaced by intelligent machinery. Functional food and non-animal derived meat dominates.

This project is supported by the European Commission under the Environment (including climate change) Theme of the 7th Framework Programme for Research and Technological Development

CRISP Key Facts:
Coordinator: University of Surrey
Project start: 1 March 2011
Project end: 28 February 2014
Funding Scheme: European Commission's Seventh Framework Programme
(Coordination and Support Action)

CREATING Innovative Sustainability Pathways – CRISP

CRISP is about delivering "bottom-up approaches" which address the question: How to overcome the gap between awareness of the issues at stake and the concrete engagement in sustainability driven action, as individuals and as a society? **So, we need to develop** viable visions of low-carbon sustainable living in 2030 and **to provide** transition pathways and practical guidance on how to achieve these visions.
